Usability Testing								
	n testing, verbally ask the particpant to perform each	ah.						
task, without giving away the answer. Note wh	n testing, verbally ask the particpant to perform each nat the participant does (and what they struggle wit	cn (h)						
for each participant.								
Goal (What You Want to Test and Why)	Task (Scenario You'll Verbally Ask the Participa to Do, without giving away answer)	Participant 1 Results	Participant 2 Results					
			To be filled in after testing					
make an appointment for their pet want customers to become aware of our hours	schedule an appointment for pet	To be filled in after testing To be filled in after testing	To be filled in after testing To be filled in after testing					
we want customers to be aware of events	locate flours of operation off website	To be filled in after testing	To be filled in after testing					
happening in the community and to be more								
active and involved in the community	find and read through the events page	To be filled in after testing	To be filled in after testing					
Usability Recommendations								
Actionable changes and fixes you'll make base	ed on the results/findings above (to be filled in after	r						
testing). Write in complete sentences.								
Recommendation #1								
Recommendation #2								
Recommendation #3								
Recommendation #4								
Technical/Performance Testing								
Test your 3 templates for techincal issues in all	I the listed browsers. Note any visual							
inconsistencies, bugs, errors and fixes that nee	ed to be implemented. Some may be similar in all	of						
the browsers. Highlight high priority technical e	errors.

Accessibility Testing								
Run through a checklist of accessibility fixes (the	his is not an exhaustive list - just a starting point).							
Note what you've fixed. Remember that you m template).	nay need to make these fixes 3 times (once for each	ch						
template).								
Accessibility Fixes (See specific requirement	nts at http://a11vproject.com/checklist.html)

<footer role="contentinfo"></footer>								
<form role="search"></form>								
<html lang="en"></html>								
Use semantic headings and structure (are you								
using proper headings and tags, rather than just P tags and Divs)								
When using :hover in your CSS, also include :								
focus state								
Ensure links are visually recognizable (underlined).								
Provide a "Skip to main content" link. (see common patterns for example)								
Use appropriate alt text on all images								
Color/Contrast Test								
Run a color contrast test for your foreground and background colors at http://leaverou.								
and background colors at http://leaverou. github.io/contrast-ratio/
